To expedite the handling of your request for information concerning Standard Change-Maker products, we are taking the liberty of using this brief acknowledgment form. We are enclosing the literature illustrating the products about which you inquired, as well as the other products we manufacture.

We think you are more interested in seeing the illustrations and descriptions promptly, without being delayed even a day or so for the preparation of a personal letter.

Sincerely yours,

John S. Dugan
Sales Manager

STANDARD \$1 BILL CHANGER ***STANDARD \$1 BILL-COIN CHANGER***

by
**STANDARD
 CHANGE-
 MAKERS**

S

The first
"FULL SERVICE"
\$1 Bill and
\$1 Bill-Coin Changers

After 5 years of comprehensive scientific research and exhaustive field-testing, Standard Change-Makers, Inc., the world's oldest and largest manufacturer of change-making devices, offers the first \$1 Bill and \$1 Bill-Coin Changers to provide "Full Service" in all of these ways:

**ACCURATE
BILL
VERIFICATION**

Standard's electronic bill verifier is the most accurate, stable and secure unit of its kind ever developed. Designed by leading electronic engineers, it's "up front with security." The bill is securely locked inside the verification chamber by the user himself. The verifier not only examines the engraving with far more critical "eyes" than other bill changers, but it also tests the physical properties of the paper and measures the bill's dimensions. Once the bill has been verified and deposited in the cash box, the change is dispensed and the verifier security door is unlocked.

**PRECISION
SELECTIVITY**

Standard's "Full Service" \$1 Bill and \$1 Bill-Changers are designed to accept 96% to 98% of all legitimate United States \$1 bills, and reject foreign, play, photocopy or counterfeit currency. They are so selective that, by the simple turn of a knob, the owner may even broaden or narrow the quality range of the \$1 bills to be accepted.

**TOTAL
ADJUSTABILITY**

The unique design of Standard's \$1 Bill Verifier has minimized the problem of "electronic drift" frequently encountered in other bill changers and electronic equipment. Standard has eliminated the need for factory service or the skilled hands and equipment of a trained electronic technician to correct "electronic drift." There is no need for costly "out-of-order" time or adjustment fees with a Standard Verifier. *If a "Full Service" Verifier ever drifts, it can be adjusted on the spot by the owner in less than two minutes. It's as easy as selecting the channel on your TV set.*

MAXIMUM SECURITY

These "Full Service" changers are equipped with Standard's exclusive, heavy-duty $\frac{3}{16}$ " steel cabinets and quadruple locks approved by Underwriters Laboratory.

INDICATOR LIGHTS

Red "REJECTED" light automatically indicates if bill is unacceptable or has been inserted improperly. Red "SOLD OUT" light indicates when bill changer is empty.

ALARM

Each unit includes an ear-splitting alarm, actuated if vandalism is attempted.

**CONTEMPORARY
STYLING**

Standard's \$1 Bill and \$1 Bill-Coin Changers have been styled by one of the nation's leading industrial designers, incorporating the latest in form, color and graphics. They stand out so that your customers will be readily aware that you provide automatic change facilities, yet they will blend with any decor.

**FLEXIBLE
INSTALLATION**

Designed with a "full access" door in the front of the cabinet, Standard's \$1 Bill and \$1 Bill-Coin Changers are easily mounted on a wall, stand or post. They also can be built into a wall or common front.

**PATENTED,
CHANGE DISPENSING
MECHANISM**

The patented change dispensing mechanism in Standard \$1 Bill and \$1 Bill-Coin Changers has proved dependable in thousands of Standard Change-Makers currently in use throughout the world. It combines high capacity picture-window coin tubes with reliable heavy-duty solenoid actuators for "Full Service," trouble-free change dispensing. Extra large return change tray with payout chute guard makes dispensed change readily accessible, yet gives full security to the internal change mechanism.

**LOADING
AND
INVENTORY**

To load a "Full Service" changer, simply slide the entire coin mechanism forward like a file drawer. Each coin in the Standard picture-window coin tubes is always visible. Coins may be loaded through funnels provided with each changer, or filled directly from bank wrappers. Coins may be quickly inventoried with a special Coin Inventory Measuring Stick, also provided with each machine.

SERIES 4000 ECONOMY MODEL \$1 BILL CHANGER

Standard Change-Makers' Series 4000 Economy Model \$1 Bill Changer includes nearly all of the outstanding "Full Service" features of Standard's larger, more versatile \$1 Bill and \$1 Bill-Coin Changers, but it costs *far* less. It actually costs less than any other bill changer on the market, even less than some "do-it-yourself add-on" units. The Economy \$1 Bill Changer is highly compact, yet for operators who already have adequate coin changing facilities, it provides a complete, efficient and totally secure means of supplying change for \$1 bills.

MODELS AVAILABLE—Available in one model that accepts \$1 bills and returns 4 quarters with a capacity of 224 vends.

FLEXIBLE INSTALLATION—Measures only 25 $\frac{5}{8}$ " x 15 $\frac{1}{4}$ " x 8 $\frac{7}{8}$ ". "Full access" door in face of cabinet. May be mounted on wall, stand or post. It may also be built *into* a wall or common front.

MAXIMUM SECURITY—3/16" steel cabinet with UL approved, case-hardened steel locks. Registered and restricted keys.

NOT AN "ADD-ON" UNIT—A complete, self contained \$1 bill changer, not an "add-on" unit requiring expensive re-wiring of your electric coin changer.

ACCURATE BILL VERIFICATION—Contains the same "Full Service" \$1 Bill Verifier used in all Standard's \$1 Bill and \$1 Bill-Coin changers—the most accurate, stable and secure unit of its kind ever developed. Designed by leading electronic engineers, it's "up front with security." The bill is securely locked inside the verification chamber by the user himself. The verifier not only examines the engraving with far more critical "eyes" than other bill changers, but it also tests the physical properties of the paper and measures the bill's dimensions. Once the bill has been verified and deposited in the cash box, the change is dispensed and the verifier security door is automatically unlocked.

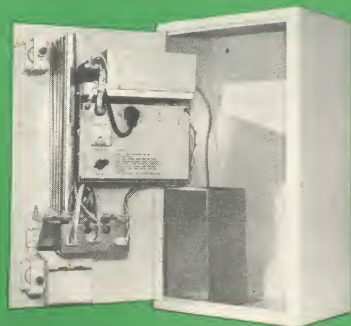

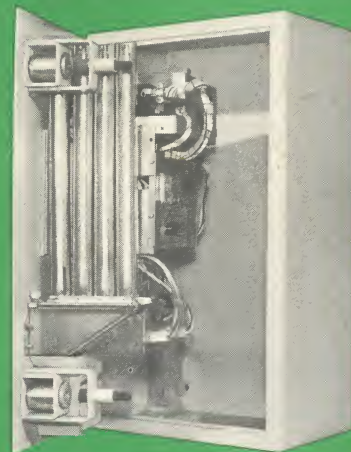

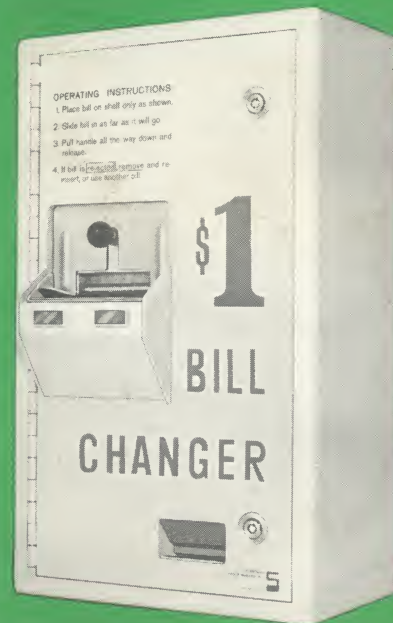

PRECISION SELECTIVITY—Designed to accept 96% to 98% of all legitimate United States \$1 bills, and reject foreign, play, photocopy or counterfeit currency. They are so selective that, by the simple turn of a knob, the owner may even broaden or narrow the quality range of the \$1 bills to be accepted.

TOTAL ADJUSTABILITY—Standard has eliminated the need for factory service or the skilled hands and equipment of a trained electronic technician to correct "electronic drift." There is no need for costly "out-of-order" time or adjustment fees with a Standard Verifier. *If a "Full Service" Verifier ever drifts, it can be adjusted on the spot by the owner in less than two minutes. It's as easy as selecting the channel on your TV set.*

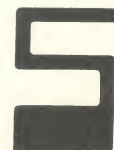

INDICATOR LIGHTS—Red "REJECTED" light automatically indicates if bill is unacceptable or has been inserted incorrectly. Red "SOLD OUT" light indicates when bill changer is empty.

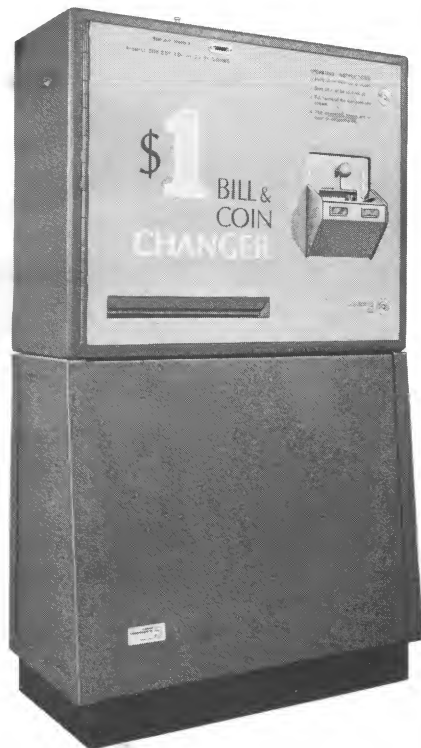

PATENTED CHANGE DISPENSING MECHANISM—Combines picture-window coin tubes and heavy-duty solenoid actuators. Payout chute guard included. Coins may be loaded in stacks or through funnels.

WARRANTY AND INSURANCE—Carries same full warranty as other Standard \$1 Bill changers. Both changer and its money content are insurable under special policy written by leading insurance company.

SECURITY STAND

for

STANDARD \$1 BILL and \$1 BILL-COIN CHANGERS

The Standard Security Stand is a companion to your Standard "Full Service" \$1 Bill or \$1 Bill-Coin Changer. It is built to provide a sturdy, flexible means of installing Standard Bill Changers. It is styled to blend in color, form and graphics with the bill changer, place it at proper height and make the changer readily accessible to the user.

DURABLE CONSTRUCTION—Ruggedly built of 16 gauge steel with $\frac{1}{8}$ " thick, $1\frac{1}{2}$ " x $1\frac{1}{2}$ " angle-iron framework. Finished in durable textured baked enamel.

CONTEMPORARY STYLING—Like the Standard \$1 Bill and \$1 Bill-Coin Changers themselves, the Standard Security Stand has been styled by one of the nation's leading industrial designers. Its functional design blends perfectly with the changer in color and form, providing a beautiful addition to any location.

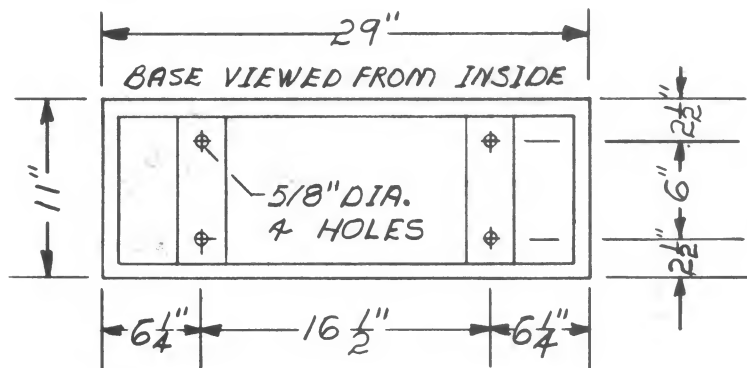

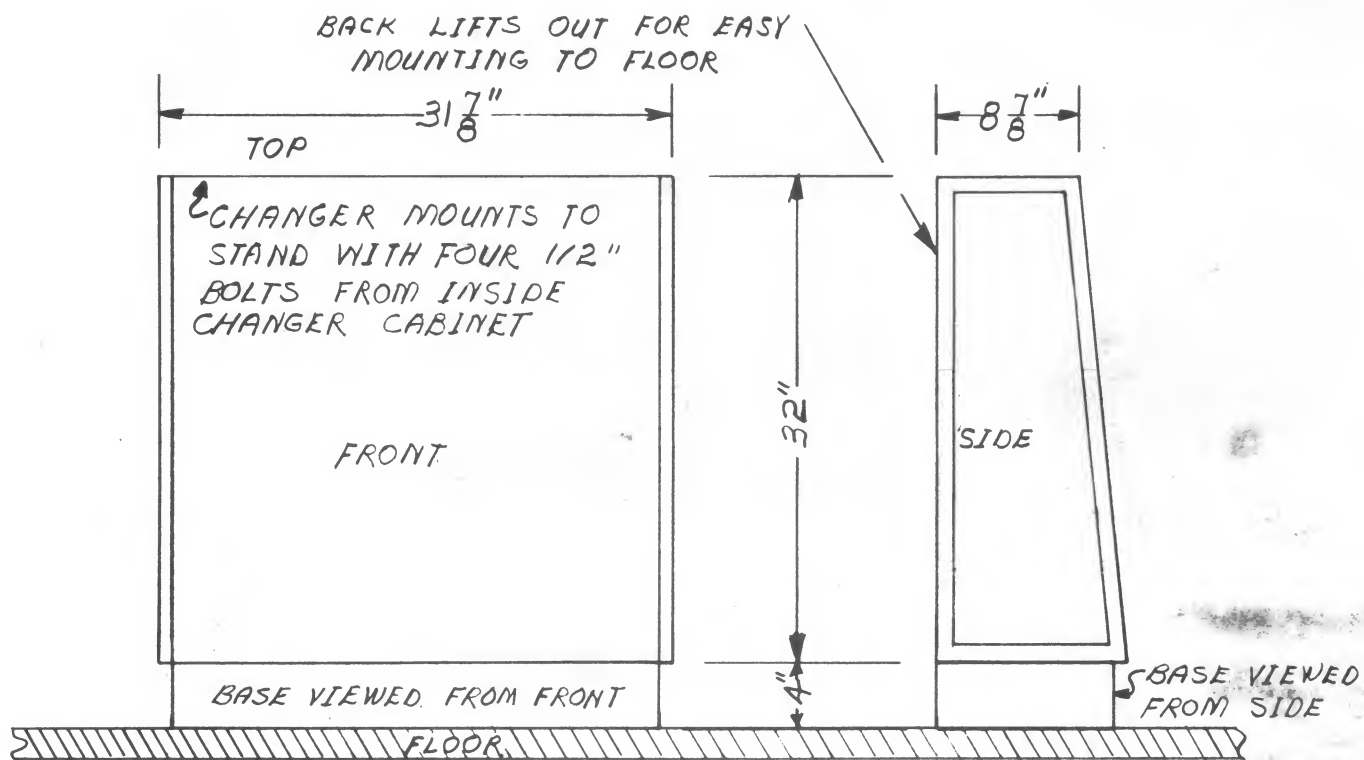

FLEXIBLE LOCATION—Use of the Standard Security Stand enables you to place your \$1 Bill or \$1 Bill-Coin Changer wherever it is most accessible to your customers. Power cord may be concealed in Security Stand.

EASY INSTALLATION—Stand mounts to floor with four $\frac{1}{2}$ " steel bolts through $\frac{1}{8}$ " thick internal cross braces. Changer mounts to stand with four $\frac{1}{2}$ " bolts from inside changer cabinet—all securely hidden.
